

Martin Schwalm

Pharmaceutical Chemistry Medical
Goethe University of Frankfurt

Vote for me!

Help me to win the Young Researcher Award 2023 from Promega.

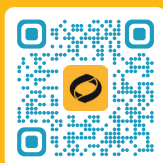

With your vote I have the chance to win a trip to Promega's headquarters in Madison/WI, USA and exchange ideas with winners from other countries and Promega R&D scientists.

Why you should vote for me

The NanoLuc/HaloTag system is a great toolbox and I have used it for several peer-reviewed drug development projects, developed novel assays and repurposed existing systems for new applications, particularly in the field of targeted protein degradation. These systems now enable efficient drug screening and validation and have already been adapted by academia and the pharmaceutical industry for independent projects. It would be an honour to receive the Young Researcher Award for my work in the field of drug development and cancer therapy.

Read more about my project and give me your vote!
